Re :- ROVER GROUP BODY & PRESSINGS and OIL SPONGE.

As requested, I have for you the latest available Health & Safety data from Rover Group, regarding the REDUCTION of Slips on OIL since the introduction of Oil Sponge.

The figures are very encouraging with an outstanding 50% reduction in the number of accidents due to slipping on Oily Surfaces comparing 1997 to 1998.

From your own visit to the Rover Factory in Swindon last year, you will recall the problems they had with Oil Contamination on wood and concrete flooring, especially in the Press shops. This I'm pleased to report has now been successfully over come with the use of Oil Sponge, which has removed excess Oil not only from the surface but also from within the wood/concrete flooring, leaving them dry and safe to walk on.

In 1997 Rover Group had 26 accidents due to slips on Oily floors.  
In 1998 this had reduced to just 13.  
1999, latest figures available up to the end of September record only 4.

Rover are very pleased with the above results and savings.

I hope this news is welcome and as always please give my regards to everyone at Phase III. Sorry I missed you when you came over last month.

Best wishes

John Ellis
