PHase III product ranks #1 in independent testing by NASA.

The National Aeronautics and Space Administration (NASA) has been conducting independent testing and evaluation of 57 different cleaning formulas openly submitted by leading manufacturing sectors from around the nation for the last 18 months. The products were tested independently, without prejudice based on several merits including, efficiency, cost, environmental safety, ease of use and realized cost.

PHase III's Heavy Duty Cleaner ranked **#1** and Phase III's California Parts Washer cleaner ranked **#7** out of the 57 products evaluated. Testing was conducted in a blind test format by NASA technicians at multiple NASA maintenance facilities as well as the Rochester Institute of Technology. The results will not be made available to the public by NASA, but individual companies may publicize their own individual results and scoring.

The products as well as the results of the testing will be made available in a catalog supplied to all NASA facilities. NASA will also make the results available to the Solvent Substitution Working Group (SSWG) and the Joint Group Pollution Prevention (JGPP) of the United States military and government sectors.

These results represent the unbiased opinion of the world's leading institute in technology. All of PHase III's cleaners are designed with the support of the Environmental Protection Agencies, Design for the Environment Program (DfE). The DfE program is one of EPA's premier partnership projects assisting to promote integrating cleaner, safer, smarter and more cost effective solutions into everyday business practices.
