

Jetson Correctional Facility Baton Rouge Louisiana

Problem: They were paying \$976.00 per month to have their 3 x 1000 - gallon grease traps pumped out. In addition, they paid Roto Rooter \$3,260.00 every quarter to clean out their lines.

In Feb. of 2004, we applied 1 x 5lb PDM-7 WT Bio Cube and 1 x 1lb WT Bio bag in each of the 3 grease traps. This was without pumping out the vats. 2 weeks later all 3 cubes were intact. One month later 1 cube was replaced and the other 2 were still intact.

On the second month all 3 cubes were replaced. We now routinely replace cubes on a monthly basis. They have not had to have their grease traps pumped since they started using Phase III products nor do they have to have Roto Rooter clean out the lines.

There is a cost savings annually of 50% to customer.

We are saving them over \$10,000.00 per year in grease trap cleaning. They are quite pleased with our products.
